

Hi,

I am excited to introduce myself as a full-stack developer with experience in Django, React, and Redux. Based on your requirements, I understand that I may not meet all the qualifications for the position. However, with my relevant experience and passion for learning, I believe I can be a great addition to your team.

Throughout my career, I have worked on challenging projects, such as my latest project - a mega ecommerce platform. This project was developed in just two months, utilizing Django on the back-end and React on the front-end. The project involved web scraping over 15 ecommerce websites, with a catalog of more than 3,000 products. It also includes geolocation and user data collection for statistics and future projects. I am proud to say that the effectiveness index for this project is at 95%. I am excited to bring my development experience to your company and continue learning and growing.

Furthermore, I am interested in web scraping and automations, which has allowed me to gain deeper insights into the market. I am a creative person and capable of tackling any challenge or obstacle presented to me, as evidenced by my work on previous projects. Additionally, I am fluent in English and ready to work in a multicultural environment.

I am eager to have the opportunity to learn more about your company and how I can contribute to your team. Please find my resume attached for your review and do not hesitate to contact me if you have any questions. Thank you for your consideration.

Best regards,

Steve
